Overview

Conference concept

The closing conference of BORDERNETwork offers an opportunity for a critical appreciation of the bundle of concerted cross-border interdisciplinary actions, developed, piloted and evaluated in the frame of the project in 8 EU member states and 4 Non-EU border regions.

Along with major plenary sessions practical workshops will offer possibility for an intensive exchange on topics bearing considerable importance as milestones for the ongoing as well as for prospective partnerships in the combination prevention settings.

The conference will be attended by more than 50 partners from 9 EU and 4 ENP-countries, international and national stakeholders from health authorities, public health and research institutes, civil society sector, HIV/ STI service provider organisations, self-help groups, community representatives.

Objectives

- To outline, share and disseminate the major results achieved by BORDERNETwork in the years 2010-2012
- To foster the discourse of mutual learning, translation of results into practice and to highlight the good-practice intervention models for key vulnerable groups and communities
- To advance the evidence on bottom-up approaches of highly active prevention in interdisciplinary cross-border cooperation, contributing to the process of quality improvement of HIV/STI prevention

Key themes

- Link better epidemiological and behavioural research to prevention interventions
- Address both direct disease causes and underlying social determinants of health inequities for behavioural change
- Integrate stand-alone measures in prevention, diagnostic, therapy and care into holistic approach
- Enhance participatory models of community-based prevention and participation of affected communities
